Interchangeability

ISO 15552 cylinders of the same bore and stroke are mounting-interchangeable with PC15; the rod thread is the same per the standard, but sensor slot type may differ. Bearings follow ISO 15 boundary dimensions: suffixes 2RS1, 2RSH and DDU correspond to KMC -2RS; 2Z corresponds to -ZZ. SV52 coils are not interchangeable with other manufacturers' coils even at the same voltage because the armature tube diameter differs. JC hubs match common L-type jaw couplings and spiders of the same size are interchangeable.
