Jaw Couplings Data Sheet

Kaveri Motion Components · Rev B, Aug 2024

Ratings

Nominal torque with NBR spider (80 Shore A): JC-075 10 Nm, maximum bore 22 mm, maximum speed 10000 rpm; JC-095 22 Nm, maximum bore 28 mm, 9000 rpm; JC-100 47 Nm, maximum bore 35 mm, 7000 rpm. Urethane spider option (95 Shore A) raises nominal torque by 50 percent. Temperature: NBR -40 to +100 deg C, urethane -35 to +70 deg C. Allowable misalignment: angular 1 degree, parallel 0.38 mm. Select so that coupling nominal torque is at least motor torque x service factor (1.5 for pumps and fans, 2.0 for conveyors with frequent starts).

Maintenance

The spider is a wear part. Inspect the spider every 6 months and replace it when cracked or deformed. Replacement spiders: JC-SP-075-NBR, JC-SP-095-NBR, JC-SP-100-NBR; urethane versions end in -U.
